

Building Indonesia's food & feed logistics backbone

FKS
FOOD & AGRI

▶ **~22 Mt of imports a year, processed in a few corridors**
The cargo is large and recurring; the mills that take it are concentrated

WHAT ARRIVES

~22 Mt

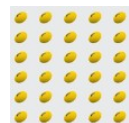

food & feed raw materials
imported every year

Wheat
11.7 Mt

Soybean meal & feed
8.0 Mt

Soybeans
2.6 Mt

▶ **Flour mills**

▶ **Feed mills**

▶ **Food processors**

WHERE THE MILLS ARE

~80%
of flour milling
capacity

~70%
of feed output

Sumatra ~10–15% · other islands ~10%

▶ **A few port corridors on Java and Sumatra carry most of the flow**

Imports 2024 (FKS). Shares are FKS estimates from published mill capacities; mill count, capacity and cargo tonnage are kept separate in the notes.

▶ At most relevant gateways, the ship still waits for the trucks

6 of the 9 food & feed gateways in the FKS screen still rely on conventional handling

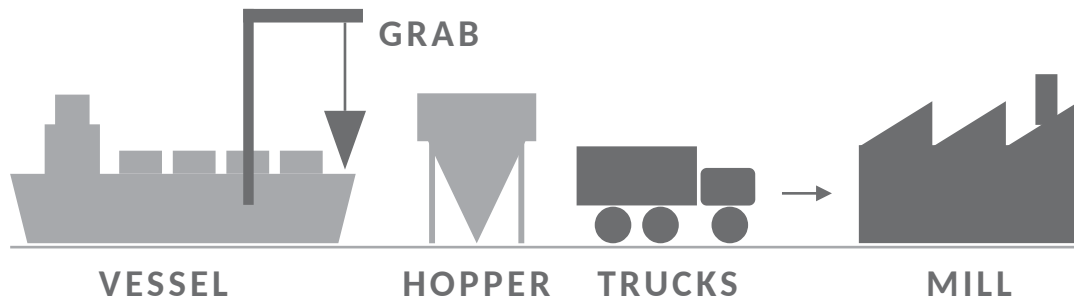

6 of 9

relevant food & feed
gateways still handle cargo
conventionally

● FKS, mechanised ○ conventional

WHAT HAPPENS THERE TODAY

~5 kt/day

discharge rate

▶ ~12 days

alongside per 60 kt
cargo

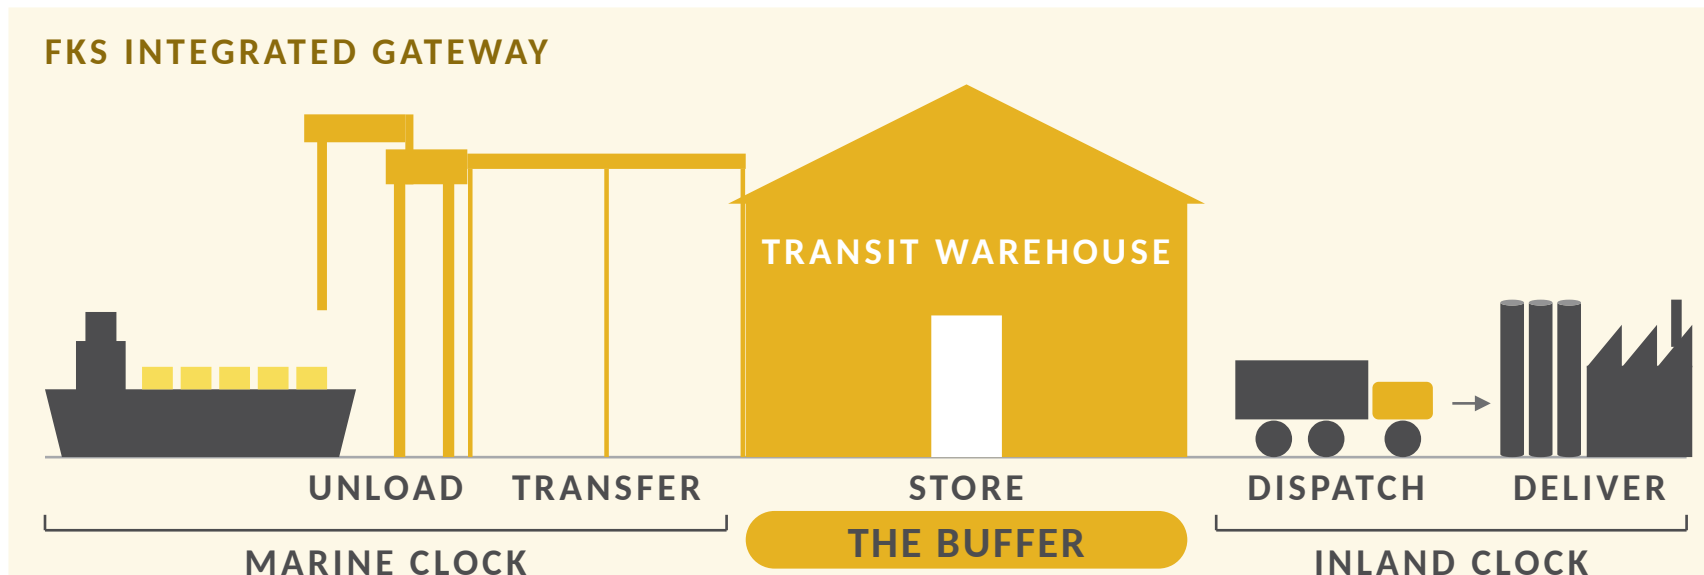

▶ **Truck-paced**

the ship waits for
the trucks

▶ **Conventional handling ties marine productivity to
truck availability**

FKS screen of public data; captive single-miller jetties excluded; classification to be confirmed. 60 kt Panamax cargo at ~5 kt/day.

► **The FKS model: the ship no longer waits for the trucks**
A transit warehouse separates the marine clock from the inland clock

► **FASTER**

discharge at full speed

► **BETTER ECONOMICS**

larger parcels, fewer calls

► **MORE SECURE**

enclosed from hold to mill

► **What the model is worth per 60 kt cargo**
 Conventional versus FKS, one Panamax cargo of 60,000 tonnes

	FASTER 	BETTER ECONOMICS 	MORE SECURE 
CONVENTIONAL	~12 days	2 calls	0.2–0.3%
FKS	~3 days	1 call	~0.1%
VALUE PER 60 KT CARGO	~US\$146k vessel-time value saved	US\$XX to be confirmed from FKS voyage data	~US\$36k cargo value preserved, illustrative

Vessel time at ~US\$16.2k per day (Panamax, 2024 benchmark). Cargo value at ~US\$300/t; loss rates subject to validation. No freight saving is shown until FKS voyage data supports one; no total is shown for the same reason.

► FKS already runs the model at three gateways

All three sit inside state-owned ports, run with Pelindo and Krakatau

BELAWAN

~1 Mtpa

Revitalised Pelindo warehouse and conveyor

CIGADING

~4 Mtpa

400 kt warehouse fed by conveyor, with KBS

TELUK LAMONG ~4 Mtpa

220 kt transit storage at the deep-water berth

~9 Mt

a year through the three gateways, about 40% of Indonesia's core food & feed imports

Volumes and capacities: FKS data, to be validated. Photographs: FKS; replace with high-resolution originals before printing.

► Built step by step since 2015

From one terminal in Surabaya to a network that now reaches into the mills

2015–17

Teluk Lamong

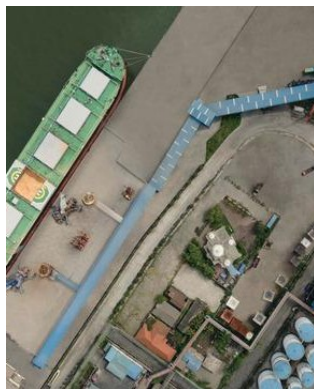

First transit
warehouse and
conveyor

2019–20

Cigading

Integrated
warehouse fed
from the jetty

2020–21

Belawan

Idle Pelindo
warehouse back
in service

2024–26

Into the mills

Conveyors and
bagging straight
into the mills

Next

Expansion

Two site
expansions, two
new gateways

► Two next projects where the model can be deployed

Dumai for Riau's palm-kernel exports; Ciwandan next door to Cigading

DUMAI

Riau • with Pelindo

~1.3 Mt

of palm-kernel
exports a year

PROBLEM

Truck-to-vessel
loading at ~1.7 kt
per ship-day

FKS SOLUTION

Pit, conveyor, ship
loader and
weighbridge

CIWANDAN

next to Cigading

~1.2 Mt

of wheat and
soybean meal a year

PROBLEM

Grab, hopper and
truck at ~5 kt per
ship-day

FKS SOLUTION

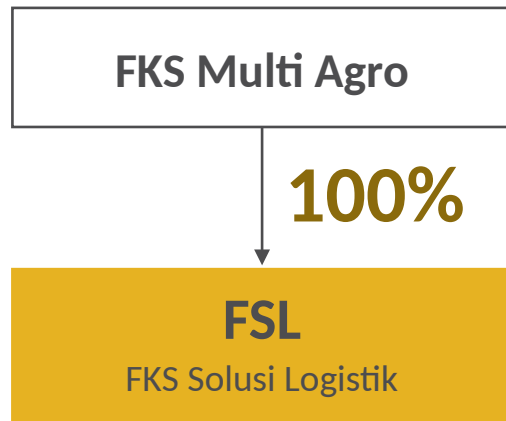

Transit warehouse,
conveyor and
controlled dispatch

EXISTING SITES Cigading 4 → 6 Mtpa • Teluk Lamong 4 → 5 Mtpa

Dumai: FKS-Pelindo cooperation document (scope and tariff). Ciwandan: FKS estimate. Capex, timing and agreement status to be shared with the feasibility model.

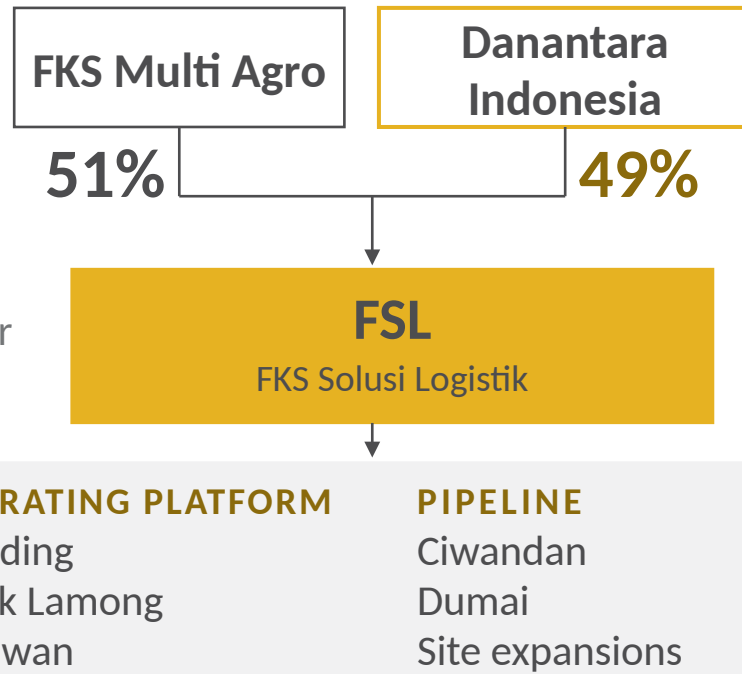

► **Danantara would invest at the FSL platform level**
Illustrative structure: FKS Multi Agro 51%, Danantara 49% of FSL

TODAY

DANANTARA INVESTS AFTER INVESTMENT

capital injection and / or
share acquisition
