

Building Indonesia's food & feed logistics backbone

FKS
FOOD & AGRI

▶ ~22 Mt of food & feed imports a year, concentrated in a few clusters

A limited number of port gateways therefore matter disproportionately

WHAT ARRIVES EVERY YEAR

~22 Mt

of core food & feed raw materials
imported (2024)

Wheat

flour, bread, noodles

11.7 Mt

Soybean meal

poultry & livestock feed

6.2 Mt

Soybeans

tempeh & tofu

2.6 Mt

Other feed

DDGS, corn gluten, meat meal

1.8 Mt

WHERE IT IS MILLED

JAVA

~80%

of flour milling capacity

~70%

of animal feed output

Sumatra ~10-15%, other islands ~10-15% · 23 of 30 flour mills and 81 of 110 feed mills are on Java

Shares are FKS estimates from published mill capacities (USDA GAIN 2026, APTINDO, GPMT)

▶ A large import market and concentrated milling: a few port corridors on Java and Sumatra carry most of the flow

Indonesia already has the cargo; the bottleneck is at the port

Six of the nine food & feed gateways still discharge at the speed of the trucks

THE GATEWAY LANDSCAPE

102

commercial ports

~20

state-run dry-bulk gateways

9

serve the food & feed mills

6

still handle cargo conventionally

The other three are FKS gateways

FKS GATEWAYS · MECHANISED

Belawan · Cigading · Teluk Lamong

CONVENTIONAL · COMMON-USER

Tanjung Priok · Ciwandan · Panjang · Tanjung Emas · Tanjung Perak · Makassar

FKS screen of public data; captive single-miller jetties excluded; classification to be confirmed

WHAT HAPPENS THERE TODAY

Discharge speed = truck availability

SLOWER DISCHARGE

~5 kt/day

typical conventional discharge rate

LONGER TURNAROUND

~12 days

alongside per 60 kt cargo; ~200 vessel-days per 1 Mt a year

VESSEL TIME AT STAKE

~US\$194k

indicative value of vessel time per 60 kt cargo, before demurrage

▶ The vessel no longer waits for the trucks

A transit warehouse decouples vessel discharge from road logistics

FKS SCOPE unloading with the port operator · enclosed conveyor · transit storage · controlled dispatch and delivery management · direct mill link where applicable

▶ Faster discharge, better freight economics, less cargo lost

What the operating model is worth to the cargo owner, per 60 kt cargo

FASTER

The ship discharges at full speed

~5 → ~20

thousand tonnes discharged per day

alongside for one 60 kt cargo

~9 vessel-days saved

~US\$146k

indicative value of vessel time per 60 kt cargo

~US\$2.4 / t · at ~US\$16.2k per vessel-day (Panamax, 2024 benchmark)

BETTER ECONOMICS

Deep berths (~14 m, ~21 m LWS) take larger parcels

Deeper berth → Larger parcel

Fewer port calls → Lower freight per tonne

CONVENTIONAL

Smaller parcels, two port calls

FKS

Panamax parcel, one gateway

Potential freight saving

TO BE QUANTIFIED FROM FKS VOYAGE DATA

Port calls ≥2 → 1: FKS voyage statement, to validate

MORE SECURE

An enclosed, reconciled chain from hold to mill

net cargo loss · FKS experience vs indicative industry range, to validate

- Enclosed handling
- Fewer touchpoints
- Reconciled movements

~US\$36k

cargo value preserved per 60 kt cargo · illustrative

~US\$0.6 / t · 0.2 pp on a US\$18m wheat cargo

Quantified value ~US\$182k per 60 kt cargo (~US\$3 / t) before any freight saving; the ~US\$146k is the avoidable part of the ~US\$194k on slide 3

▶ FKS already operates at three strategic food & feed gateways

All three sit inside state-owned ports, run with Pelindo and Krakatau

~9 Mt

a year through FKS's three gateways

about 40% of Indonesia's ~22 Mt of core food & feed imports

Volumes and capacities: FKS data, to be validated

BELAWAN

~1 Mtpa

Medan · North Sumatra · Pelindo

Revitalised 30 kt warehouse and conveyor

Operating partnership with Pelindo

CIGADING

~4 Mtpa

Cilegon · Banten · Krakatau (KBS)

Integrated 400 kt warehouse fed by conveyor from the jetty

Co-invested with KBS; 30 + 20-year term

TELUK LAMONG

~4 Mtpa

Surabaya · East Java · Pelindo

~220 kt transit storage behind the deep-water berth

JV with anchor feed customers

► FKS has built the platform step by step since 2015

From one terminal in Surabaya to three gateways, now being linked from berth to mill

2015–17

Teluk Lamong

Surabaya · East Java

First transit warehouse and conveyor, at Pelindo's new deep-water berth

2019–20

Cigading

Cilegon · Banten

Integrated warehouse fed by conveyor from Jetty 1, co-invested with KBS

2020–21

Belawan

Medan · North Sumatra

Idle Pelindo warehouse and conveyor back in service in ~11 months

2024–26

Connecting the chain

Cigading · Teluk Lamong

Jetty 2 conveyor, a bagging line and a conveyor into the mills (2026, planned)

NEXT

Next

Expansion

Sites and new gateways

Cigading 4 → 6 Mtpa
Teluk Lamong 4 → 5 Mtpa
New: Ciwandan, Dumai

▶ Next projects identified: two new gateways and two site expansions

Ciwandan replicates the import model next to Cigading; Dumai applies it to palm-kernel exports

DUMAI

Riau · Pelindo **NEW GATEWAY · EXPORT LOADING**

~1.3 Mt

of PKE and PKS a year (agreement estimate, subject to anchor cargo); ~2 Mt of dry bulk in total

WHY

Riau's main port for palm-kernel feed exports

TODAY

Conventional handling, ~1.7 kt per ship-day

FKS PLAN

Pit, conveyor, ship loader and weighbridge, with Pelindo

UNLOCKS

Faster loading; initial FKS tariff component of Rp40,000/t

CIWANDAN

Banten · next to Cigading

NEW GATEWAY

~1.2 Mt

of wheat and soybean meal a year, still handled by grab and truck

WHY

The Banten cluster, where FKS already runs Cigading

TODAY

Grab, hopper and truck, ~5 kt per ship-day

FKS PLAN

Warehouse, conveyor and controlled dispatch

UNLOCKS

The Cigading model, replicated next door

Capex, timing and cooperation-agreement status for both projects: to be shared with the feasibility model

SITE EXPANSIONS

Cigading 4 → 6 Mtpa · Teluk Lamong 4 → 5 Mtpa · lowest-risk capital: the sites are already in place

► Danantara could acquire a strategic stake in FSL

Danantara would take a stake at platform level, with exposure to FSL's operating assets and pipeline

TODAY

DANANTARA INVESTS

AFTER INVESTMENT

ILLUSTRATIVE · SUBJECT TO NEGOTIATION

FSL PLATFORM

Illustrative asset and project entities under FSL; entities, JV shares and cooperation-agreement tenors to be confirmed

OPERATING TODAY

PIPELINE

WHY THE FIT

Pelindo, FKS's port partner at four of the five sites, is a Danantara portfolio company; concession governance to be addressed in the structure

NEXT STEPS

NDA and data room · feasibility model with project and equity returns and capex per project · valuation, stake size, new capital versus share purchase and use of proceeds to be agreed
