

# Building Indonesia's food & feed logistics backbone

Strategic investment discussion | FKS Group × Danantara Indonesia

October 2026 · Strictly private and confidential

**FKS**  
FOOD & AGRI

# ▶ ~22 Mt of food & feed imports a year, concentrated in a few clusters

A limited number of port gateways therefore matter disproportionately

## WHAT ARRIVES EVERY YEAR

**~22 Mt** of core food & feed raw materials imported (2024)

## WHERE IT GOES

### Wheat

flour, bread, noodles

**11.7 Mt**

### Soybean meal

poultry & livestock feed

**6.2 Mt**

### Soybeans

tempeh & tofu

**2.6 Mt**

### Other feed

DDGS, corn gluten, meat meal

**1.8 Mt**

**23 of 30**

flour mills are on Java

**81 of 110**

feed mills are on Java

# ▶ Indonesia already has the cargo; the bottleneck is at the port

Six of nine food & feed gateways still discharge at the speed of the trucks

## WHERE THE OPPORTUNITY SITS

**636** public ports in the national port plan

▼  
**102** commercial ports

▼  
**~20** state-run dry-bulk gateways

▼  
**9** serve food & feed mills and refineries

▼  
**6** still handled conventionally

*The other three are FKS gateways. FKS screen of public data.*

Share of the ~22 Mt through these six gateways  
**FKS input required**

## WHAT HAPPENS THERE TODAY

## Discharge speed = truck availability

LOWER PRODUCTIVITY

**~5 kt/day**

typical conventional  
discharge rate

Also: truck queues at the port, demurrage exposure and operational risk

LONGER TURNAROUND

**~11 days**

alongside, one 55 kt cargo

VESSEL TIME, PANAMAX

**~US\$16k**

per vessel day (2024)

▶ There is already a large cargo base; the opportunity is to modernise how it moves through selected gateways.

# ► The vessel no longer waits for the trucks

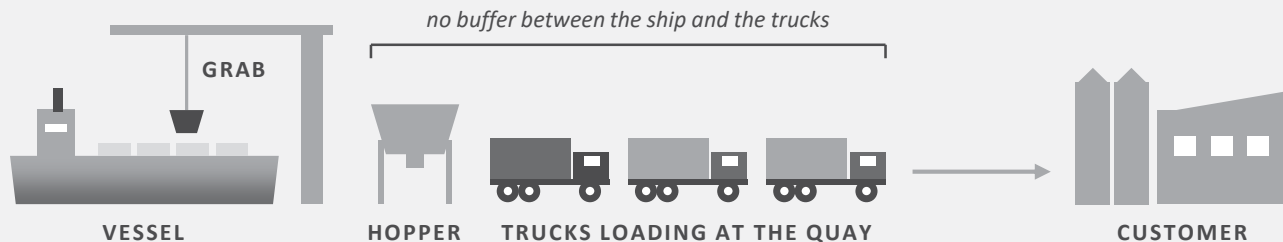

## A transit warehouse decouples vessel discharge from road logistics

### BEFORE

#### Conventional

Marine operation  
= truck operation

If the trucks slow down,  
discharge slows down

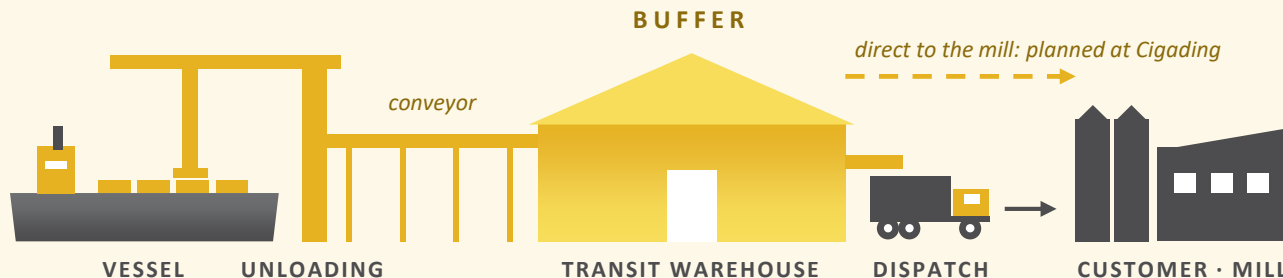

### AFTER

#### FKS integrated

Marine and inland  
logistics decoupled

The transit warehouse  
is the buffer

**FKS SCOPE** unloading with the port operator · conveyor · transit warehouse · delivery management · mill link

# ► Faster discharge, better freight economics, less cargo lost

What the operating model is worth to the cargo owner, per tonne

## FASTER

The ship discharges at full speed

~5 → ~20

thousand tonnes discharged per day

CONVENTIONAL  11 days

FKS  <3 days

alongside for one 55 kt cargo

~US\$2.4 / t

vessel time saved (derived from public data)

FKS internal: 6–8 → 25–30 kt/day, to validate

## BETTER ECONOMICS

Deep –14 m LWS berths take larger parcels

CONVENTIONAL

Smaller parcels,  
two port calls

FKS

Panamax parcel,  
one gateway

US\$ [ X ] / t

to be quantified from FKS voyage data

Port calls ≥2 → 1: FKS statement, to validate

## MORE SECURE

An enclosed, reconciled chain from hold to mill

CONVENTIONAL  0.2–0.3%

FKS  ~0.1%

net cargo loss

- Enclosed handling
- Fewer touchpoints
- Reconciled movements

~US\$0.6 / t

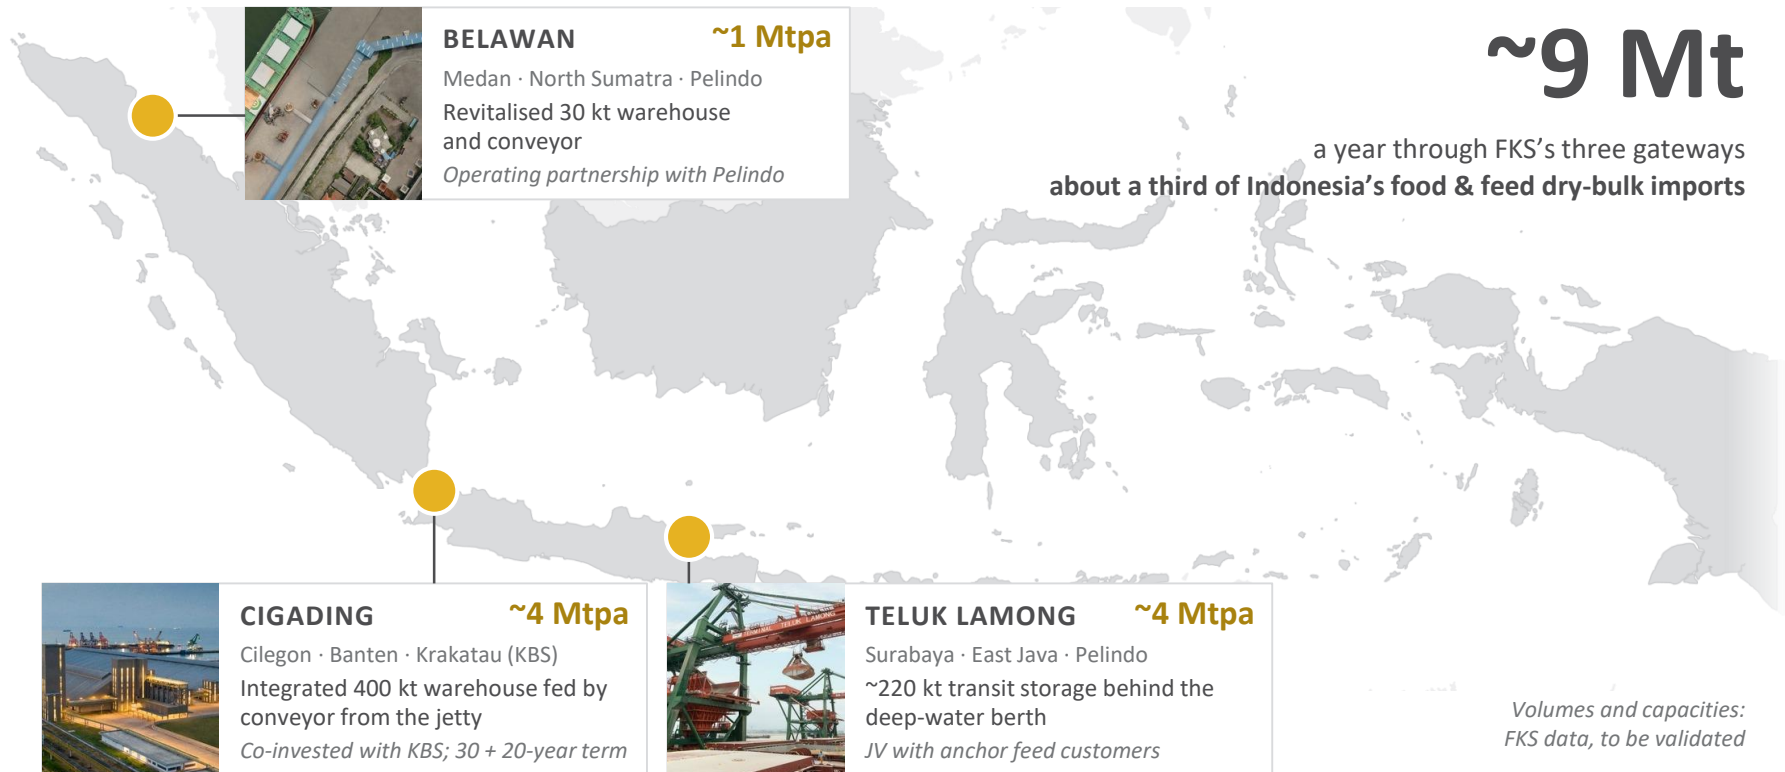

cargo value preserved (illustrative)

Conventional rate: industry data required

FKS rate: internal, to validate

## ► FKS already operates at three strategic food & feed gateways

All three sit inside state-owned ports, run with Pelindo and Krakatau

# ▶ FKS has built the platform step by step since 2015

From one terminal in Surabaya to three gateways linked from berth to mill

**2015–17**

## Teluk Lamong

Surabaya · East Java

First transit warehouse and conveyor, at Pelindo's new deep-water berth

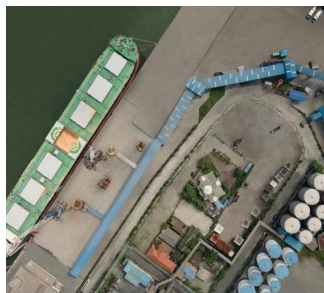

**2019–20**

## Cigading

Cilegon · Banten

Integrated warehouse fed by conveyor from Jetty 1  
Co-invested with KBS

**2020–21**

## Belawan

Medan · North Sumatra

Idle Pelindo warehouse and conveyor back in service in ~11 months

**2024–26**

## Connecting the chain

Cigading · Teluk Lamong

Jetty 2 conveyor, a bagging line and a conveyor into the mills (2026, planned)

**Next**

## Expansion

Sites and new gateways

Cigading 4 → 6 Mtpa  
Teluk Lamong 4 → 5 Mtpa  
New: Ciwandan, Dumai

GREENFIELD

BROWNFIELD

CONNECT AND EXPAND

## ▶ The current platform gives FKS a clear path for expansion

Two new gateways and two site expansions, drawn from the gateway screen

● FKS gateway today

○ New gateway in the pipeline

○ Expansion at an FKS site

● Watchlist, public data only

### DUMAI Riau - Pelindo

#### NEW GATEWAY

|                 |                                            |
|-----------------|--------------------------------------------|
| WHY             | ~2 Mt of dry bulk a year; Riau's main port |
| TODAY           | Conventional, ~1.7 kt per ship-day         |
| FKS OPPORTUNITY | Brownfield handling and storage upgrade    |
| VALUE CREATED   | Faster turnaround, subject to anchor cargo |

### CIWANDAN Banten, next to Cigading

#### NEW GATEWAY

|                 |                                            |
|-----------------|--------------------------------------------|
| WHY             | ~1.2 Mt of wheat and soybean meal a year   |
| TODAY           | Grab, hopper and truck, ~5 kt per ship-day |
| FKS OPPORTUNITY | Warehouse, conveyor, controlled dispatch   |
| VALUE CREATED   | The Cigading model, replicated next door   |

### SITE EXPANSIONS FKS plan

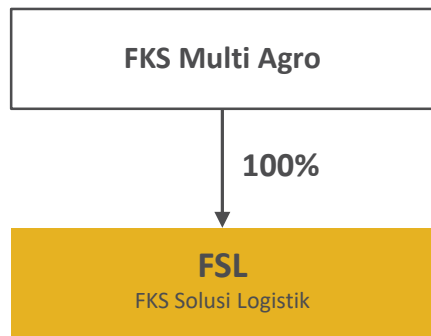

#### EXPANSION

|               |                                           |
|---------------|-------------------------------------------|
| CIGADING      | 4 → 6 Mtpa: bagging, conveyor, warehouse  |
| TELUK LAMONG  | 4 → 5 Mtpa: new wharf and warehouse       |
| VALUE CREATED | Lowest-risk capital: the site is in place |

## ► Danantara could acquire a strategic stake in FSL

Capital enters at platform level and is deployed across FSL's assets and pipeline

TODAY

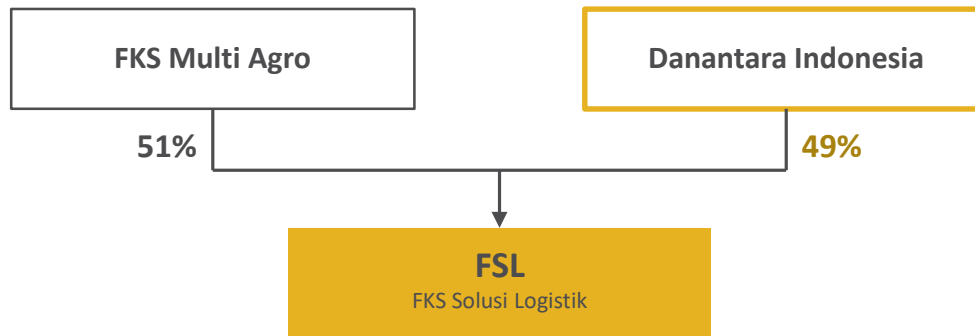

DANANTARA INVESTS

capital injection  
and / or share  
acquisition

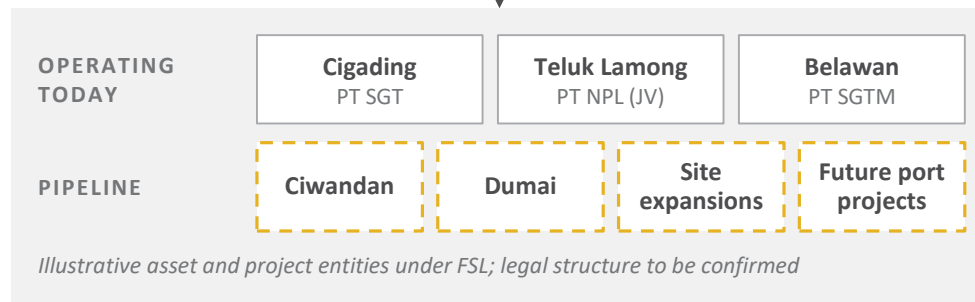

AFTER DANANTARA INVESTMENT

ILLUSTRATIVE · SUBJECT TO NEGOTIATION

TO BE AGREED AND MODELLED

- Valuation and stake size
- New capital versus share purchase
- Use of proceeds: pipeline capex
- Returns: project and equity IRR, payback
